PROFESSIONAL SUMMARY

CompTIA Security+ certified cybersecurity professional with 7+ years of advanced data science experience, transitioning into security operations with specialized training in threat intelligence, SOC analysis, and incident response. Proven ability to apply a rigorous analytical and investigative mindset to detect, analyze, and mitigate cyber threats across complex environments. Skilled at translating technical security findings into clear, actionable insights for executive and cross-functional stakeholders. Continuously developing expertise in cybersecurity tools, with hands-on exposure to SIEM platforms, network security fundamentals, and the MITRE ATT&CK framework

CERTIFICATIONS

CompTIA Security+	04/2026
Cybersecurity Practitioner Certification , Montgomery College	04/2026
SOC Operations Analyst (SOCOA I) , BCR Cyber	11/2025
Industrial Control Systems Security , The University of Texas at San Antonio	08/2025
Malware Discovery and Investigation , The University of Texas at San Antonio	05/2025
Digital Forensic Analysis , The University of Texas at San Antonio	03/2025
Cybersecurity Bootcamp , Maryland University	05/2025

EDUCATION

Master of Science in Applied Data Science, Syracuse University
B.S International Business, Universidad Popular Autonoma del Estado de Puebla, Mexico

APPLICABLE SKILLS

Security Operations: Threat Intelligence, Incident Response, Risk Assessment, Vulnerability Management
Networking & Analysis: Network Traffic Analysis, Wireshark, Nmap, TCP/IP Protocols
SIEM & Monitoring: Splunk, ELK Stack, Log Analysis, Alert Triage
Security Tools: Nessus, Kali Linux, Autopsy, YARA
Programming & Data: Python, SQL, R, Statistical Modeling, Data Analysis
Frameworks: MITRE ATT&CK, NIST CSF, CIA Triad
Soft Skills: Executive Reporting, Cross-functional Communication, Bilingual English/Spanish

PROFESSIONAL EXPERIENCE

Montgomery College - TechMAP Program

Cybersecurity Fellow

02/2026 – 04/2026

- Conducted vulnerability assessments using offensive security techniques to evaluate system security posture and prioritize remediation efforts
- Analyzed network traffic and TCP/IP protocols to detect suspicious activity, applying layered defense strategies and network security architecture principles
- Investigated attack vectors including phishing, spoofing, man-in-the-middle, and session hijacking, identifying indicators of compromise (IOCs) and recommending mitigation controls
- Implemented and evaluated authentication, access control, and encryption mechanisms including SSL/TLS and IPsec
- Completed Security+ aligned training covering network security, threat management, cryptography, and risk mitigation. Culminating in CompTIA Security+ certification

BCR Cyber
Cybersecurity Fellow

08/2025 – 09/2025

- Monitored and analyzed Splunk SIEM dashboards to detect alerts, identify adversary techniques, and document remediation actions in a simulated SOC environment
- Participated in a team-based cyber range simulation performing threat detection, log analysis, and end-to-end incident response workflows
- Mapped adversary behaviors to the MITRE ATT&CK framework, identifying TTPs and supporting threat intelligence documentation
- Earned SOC Operations Analyst I (SOCOA I) certification through intensive hands-on training in threat detection, incident response, and log analysis

University of Maryland Global Campus
Cybersecurity Trainee

09/2024 – 05/2025

- Completed an intensive 6-month, cybersecurity bootcamp covering 7 core domains: Host-Based Security, Network Security, Identity & Access Management, Cryptography, Security Assessment & Testing, Security Operations, and Application Security
- Gained hands-on experience through labs and projects using industry tools including Nmap, Wireshark, Kali Linux, Metasploit, Autopsy, OpenVAS, and GoPhish across real-world attack and defense scenarios
- Executed a capstone project conducting a structured 5-step penetration test of a simulated enterprise environment, applying ethical hacking methodologies and documenting findings with remediation recommendations
- Applied Zero Trust principles and IAM governance frameworks, with exposure to the Microsoft Security, Compliance & Identity Fundamentals (SC-900) objectives
- Leveraged AI-driven techniques for threat detection, incident response, malware analysis, and predictive security analytics including NLP applications in cybersecurity

Catholic Relief Services
Data Scientist

Baltimore, MD
01/2018 - 10/2024

- Architected and deployed machine learning models and AI-driven data pipelines that increased productivity by 33%, reduced processing time by 20%, and improved data quality by 23%, leveraging advanced preprocessing, feature engineering, and model optimization techniques
- Translated complex data findings into actionable C-suite recommendations through analytical reports and presentations, contributing to \$200M+ revenue achievement
- Established enterprise-wide data governance frameworks, leading cross-functional initiatives for ethical AI practices, data privacy compliance, and quality assurance standards
- Applied analytical techniques to identify anomalies and potential risks in large datasets, supporting early detection of irregular patterns and investigative analysis
- Designed scalable data architectures and data pipelines, creating comprehensive data models and documentation that improved system performance and data accessibility, utilizing analytical skills
- Collaborated with 5+ cross-functional teams to develop advanced AI solutions for automated pattern detection and sentiment analysis, creating interactive dashboards and investigative workflows that enhanced data collection efficiency and delivered actionable intelligence to executive leadership
- Implemented comprehensive data security protocols and quality assurance measures for Personally Identifiable Information PII and sensitive data, ensuring compliance with privacy regulations and establishing audit trails for secure data handling across enterprise systems
